Date-February 15, 2012
Time-10:00 a.m. until 11:30 a.m.
Address -220 French Landing Drive-
Nashville, Tennessee
Address-1st Floor Volunteer Room

AED/EAP Overview

Automated External Defibrillator (AED)

Each year about 400,000 Americans die of cardiac arrest, more than any other single cause. The chance of survival declines 8% with every minute that passes. Electrical shock restores a heartbeat and circulation, but to survive neurologically intact, rescue must be swift.

The Commissioner's Safety Council will present a presentation on the purpose, scope and applicability of an AED program, which will include an understanding of the federal and state laws associated with an AED program.

Emergency Action Plan (EAP)

The purpose of Emergency Action Planning is to reduce the risk of injury or loss of life and to minimize property damage during an unusual event or emergency.

This presentation will provide an overview of TOSHA's standard requirement 29 CFR 1910.38 as well as offer a format on basic element guidelines to ensure levels of preparedness.
